

- 56 *repens* Species. A recent arrival in this country, bearing waxy yellow urns on an unusual toothed leaf evergreen plant. Rare and very desirable.
- 57 *repens x songarica* Hybrids. Interesting hybrids from a plant which has songarica type flowers on repens type foliage and habit. White stars on a trailing plant, and as a bonus, likely to be scented!
- 58* *reticulata* Species. Lavender to purple inverted urns, often with a touch of cream or green, on climbers to about 8-9 ft, with variably net-veined leaflets especially on the underside. Summer to early Autumn flowerer.
- 59 *serratifolia* Species. Small lemon/green bells with a lemon scent, growing to 15 ft. Serrated edge leaves, and good seed heads add to it's impact.
- 60 *songarica* Species. With small, white star shaped scented blooms on an unusual form of plant, which is upright and almost architectural.
- 61 *stans* Species. With lots of small, slim, blue to white, recurved, tubular flowers on an upright plant, growing to about 4 – 5 ft. Very delicate, usually scented and most attractive.
- 62 *stans – pink form* Species. With lots of small, slim, hopefully pink, recurved, tubular flowers on an upright plant, growing to about 4 – 5 ft. Very delicate, usually scented and most attractive. Collected from pink flowered forms.
- 63* *stans – wild collected in Japan* Species. With lots of small, slim, blue to white, recurved, tubular flowers on an upright plant, growing to about 4 – 5 ft. Very delicate, usually scented and most attractive.
- 64* 'Swedish Bells' Hybrids. Desirable plants, with largish, mid to light blue pendulous bells on a plant to around 6 – 8 ft.
- 65 *tangutica* Species. Clear yellow bells in great profusion, growing on strong plants. The subsequent show of beautiful silky seed heads is truly spectacular.
- 66 *texensis* Species. Flowers, usually pitcher shaped, in colours usually from pink to true red, which curl slightly back at the tips, often with a cream lip.
- 67 *texensis* hybrids Hybrids. From extremely attractive plants with flowers in reds or pinks, which are often long tulip shaped. Herbaceous from 5 to 15 ft.
- 68 *texensis* special Selection. Probably pollinated by a plant which has larger than usual pitcher shaped, superb red flowers, on a climber to about 6 ft.
- 69 *tubulosa* Species. Upright, self supporting plants up to 6 ft. if happy in situation, with scented, hyacinth like flowers, from white through to purple. Unusual and lovely.
- 70 *urticifolia* Species. A rare plant with deep blue/purple narrow bottle shaped recurving flowers on a strong herbaceous plant to 4 – 5 ft.
- 71 USA mixture Hybrids. A wide ranging mixture, varying in shape, size, colour and height of growth. A tempting mixture, containing some real treasures.
- 72* *veitchiana* Species. A close cousin to *rehderiana*, but with slightly different leaves, which can have 20 or so leaflets. Rare and interesting.
- 73* *versicolor* Species. Lavender to red pitchers, fading to pale cream or green tips, growing on a herbaceous plant to 6 ft or so. Extremely attractive.
- 74 *viorna* mixture A choice selection from these varicoloured pitcher shaped flowers on deciduous climbers to 8 ft. or so. Could be some real gems here.

- 75 *vitalba* Species. Our only native clematis, the well loved 'Old Man's Beard', whose strength is it's superb seed heads. A very strong climber to 25 ft.
- 76 *viticella* Species. Often dark purple, recurved bells on strong plants up to 15 ft. Very robust and trouble free European species.
- 77 *viticella* mixture Hybrids. Open bells in a variety of shades and colours, including bi-colours, on strong, trouble free plants growing to around 15 ft.
- 78 *viticella* subsp. *campaniflora* Species. Small white recurved bells, with a touch of blue/mauve, on strong plants up to 15 ft. A robust and generally trouble free Iberian subspecies.
- 79 *viticella* subsp. *campaniflora* 'Lisboa' Hybrids. From an attractive plant which has small pendant, open, recurving bells in purple profusion. Growing to around 10 ft.

LATE ADDITIONS

- 59a *sibirica* var. *tianschanica* A rare and new offering from the atragene group, with large, open bells in white, where the staminodes vary in form from the basic species.
- 74a *virginiana* – wild collected A North American version of our own 'Old man's beard', wild collected in Ontario. A vigorous climber with many small white starry flowers.

Please note that a star after a number indicates very small stocks of that particular variety. We cannot guarantee that all requests for those particular varieties will be met, and requests will be dealt with on a strictly 'first come, first served' basis.

Finally a big thank you to all who made the seed list possible, without you there would be no seed exchange.

PS – I get most of the thanks, but it is people like Keith Treadaway doing all the presentation paperwork, Glenis Dyer receiving and sorting the orders, plus a good number of others who help in so many different ways, that really make it happen.

Mike Brown – Dec. 2008
